# 4-WEEK STUDY PLAN

## Preface

This guide provides a detailed plan for someone starting about 4 weeks out from the GRE. The plan assumes you have the Recommended Materials listed (the Official Guide to the GRE as well as the PowerScore publications), and we also encourage you to consider the optional/supplementary materials.

## General thoughts

Successfully preparing for the GRE is about consistency and diligence. Even though the test measures how you think about the basics of high school- and college-level English and math, training yourself to think like the test makers requires time. Simply put: this isn't a test where cramming proves effective! Instead, your efforts need to be extensive, where you make the most of every study opportunity and spend at least ten to fifteen hours of dedicated time preparing each week (and hopefully much more!).

Four weeks may not seem like enough time, and you may find that you are not able to cover all the material to your complete satisfaction. However, if you set a goal, make a plan, and stick to both, you will find that you have sufficient time to accomplish far more than you expect and likely make the improvements you need to succeed. You must be prepared to work diligently and to be very thorough as you follow the assignments provided. In addition to the assignments from the GRE Bibles and the Official Guide to the GRE, we outline two full-length practice tests for you to take using the GRE PowerPrep software (there are two additional tests available for purchase from ETS if you have the time and desire to attempt more). If you find that you cannot complete all of the assignments in the time given, prioritize your tasks based on your specific areas of weakness and where you feel you have the greatest opportunity to gain points. And we encourage you to attempt additional practice sets if time permits!

Naturally if you are already extremely strong in one of the areas—say, Reading Comprehension—you can omit portions of the plan tailored to that section and devote that time to further study in another section. Similarly, if you find that you still have room for improvement upon completion of the required material for a given section, our private tutoring is a worthwhile consideration.

Each of the four weeks in this study schedule provides a list of recommended tasks—from reading specific chapters, to completing problem sets, to taking timed practice tests—and should generally be completed in the order given. However, as mentioned, elements can be adjusted as needed to accommodate variations in your day-to-day commitments and your unique skill set as you get closer to test day.

You will notice that each week's assignments are categorized into one of three types: Quantitative Reasoning, Verbal Reasoning, and Practice Tests. This will give you a good sense of exactly what is to be covered during a particular week, and allow you to better adjust the schedule and content to your own needs as you progress.

A chart is provided for each week outlining the materials to be used and sections for your notes and progress reports. We strongly encourage you to keep detailed information about exactly what was completed and when, any elements left uncompleted that should be a priority the following week, and your performance and general thoughts on each. These notes will allow you to more accurately measure your progress as well as track any uncompleted assignments.

Let's get started!

### ■ Practice Test

Before you begin your preparation, it is highly recommended that you take a full-length practice exam. While many students are concerned that without knowing what to expect they may feel ill equipped to do a practice test, please set aside your expectations and work through the test knowing what you know right now. Take the time to read the instructions for each section and make your best attempt at the essays and questions.

We suggest Practice Test 1 on the GRE PowerPrep software, which is available online at [www.gre.org](http://www.gre.org) (you must register for an ETS account to access this test). The Official Guide to the GRE provides further information on this software if you have questions about locating it.

The PowerPrep software mimics the computer-adaptive experience of an actual GRE, and it's extremely important that you become comfortable with this format prior to test day. Be sure to take this exam under timed conditions (even though it is not officially timed by the PowerPrep software) and be diligent and honest in your timing.

Once you are finished you will have (1) an understanding of the test experience, (2) a baseline assessment of your current strengths and weaknesses, and (3) a better ability to approximate the test interface while doing practice work.

## Practice Test

- At the end of the week, you'll be near the halfway point in your preparation. It's time to take your second full-length timed practice test to gauge your progress. We suggest Practice Test 2 on the GRE PowerPrep software, available at [www.gre.org](http://www.gre.org). The Official Guide to the GRE provides further information on this software if you have questions about locating it.

Be sure to look for opportunities to use the skills you have learned and practiced on your homework, but while you're taking the test focus only on the task in front of you. Your goal is to get as many points possible by any means necessary. You will have an opportunity to analyze the problems in more detail and consider alternate approaches during your review.

Upon completion of the exam, it is essential that you review the questions that you missed and guessed correctly. It is only through examination of your errors that you will learn to prevent them on similar questions in the future. You can find solutions to all PowerPrep questions in the PowerScore GRE Free Help Area on our website.
